Gateway Zigbee / WiFi for different scenes

Office use

# Open mode

---

You can open the door by pressing the handle directly. When you close the open mode, you need an authorized passcode or fingerprint to unlock the door.

A black smart door lock is mounted on a wooden door. It features a numeric keypad with a blue horizontal line above the numbers 1-3. Below the keypad is a circular sensor, likely for fingerprint scanning. A black handle is attached to the lock. A red speech bubble is positioned to the left of the keypad.

Lift the handle to lock

## Electronic lock

In the case of anti-locking, only users with administrator rights can open the door. Ordinary users cannot open the door.

# Multiple alarm

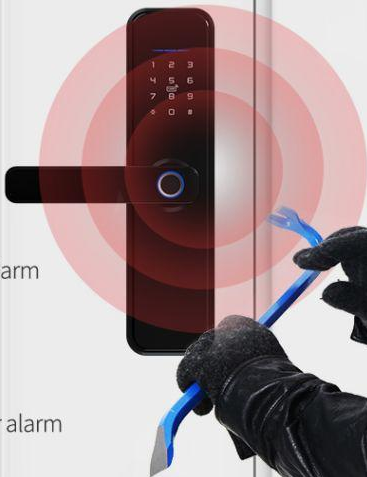

If the door lock is pried open, it will make a loud noise to scare off the burglar and give the house owner a notice to call the police in time.

## Mortise Options

## Product Features:

1. Access by wifi App, M1 Card, Fingerprint, Pass code, Wristband or key

2. Compatible with various mortise to fit 99% doors.

single latch 60/70, European 5050/ 6050 / 3585/ 4585/ 6085/ 6072 / 5572

3. Unique stylish thin panel, 255\*65mm, it can be fit most of the wooden, sliding doors.

4. One-Touch-Access Biometric Fingerprint sensor on the reader.

Fingerprint scanner will wake automatically once you place your finger on it and is conveniently positioned to accompany your natural hand position.

One seamless action allows you to wake the lock, read your fingerprint, and unlock your door.

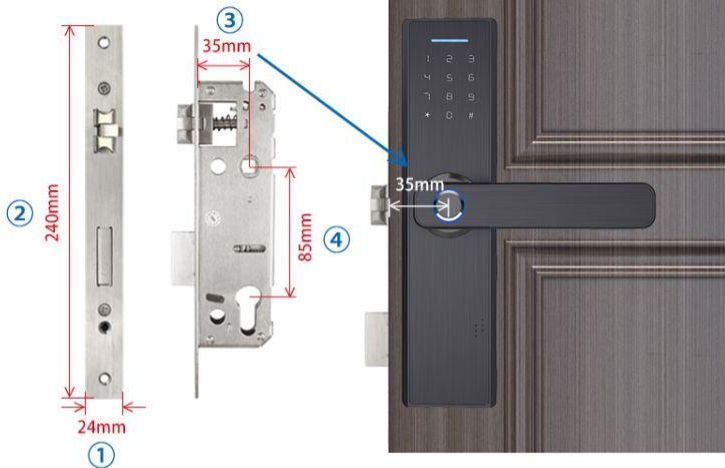

The whole unlock action takes only 1 second. It can auto relock your door for you so your home is always safe.

5. Strong and secure Aluminum alloy lock panel, Anti-corrosion and sturdy.

6. Back-up USB external power supply interface, in case the power is dead.

7 Reversible free style handle.

8. Waterproof rubber design, which is good for outside door

Example: 24×240 (35 85)
